

I am logging in a complaint that restricts the use of VP-100 to 1 VRS provider. The VP-100 should be available to all VRS providers. By hooking up 2 VPs cause hardship to the VRS users that required two separate IP addresses or special router that can handle multiple IP addresses. In addition, I am logging a complaint that FCC forbid reimbursements for Cable/DSL monthly fee. In order to use VP, it requires broadband lines. Hearing people doesn't required broadband to communicate with others.
